An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. William H. Francis on Thursday March 2, 2006.

The application has been amended as follows:

IN The CLAIMS:

25. (Amended) The method of claim 24 wherein the step of forming the valve bore including forming the non-uniform portion of the valve bore so that the interface angle increases as the valve head is increasingly displaced from the valve seat, is performed by calculating the spring force at various positions of the valve [ball] head spaced from the valve seat, determining an effective surface area of the valve [ball] head on which a fluid at a predetermined pressure needs to act to offset the spring force at each position of the valve [ball] head as desired, determining the interface angle that corresponds to each determined effective surface area for each position of the valve [ball] head, and then forming the valve bore with a shape that provides the determined interface angle at each position of the valve [ball] head.

26. (Amended) The method of claim 25 wherein the effective surface area and interface angle are chosen to provide a net force on the valve [ball] head that offsets the increase in the spring force acting on the valve [ball] head as the valve [ball] head is increasingly displaced from the valve seat so that the pressure control valve has a

substantially constant pressure response over a range of positions of the valve [ball]
head relative to the valve seat.
